## APPENDIX

### METHODOLOGY OF THE FISCAL TABLE OF THE BUDGET OF THE REPUBLIC OF MACEDONIA

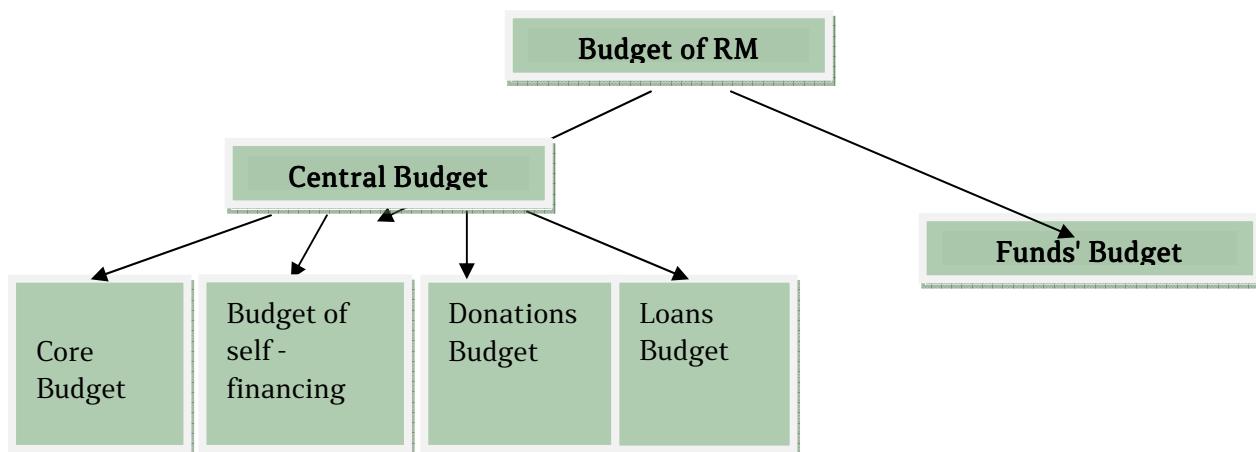

Methodology used when preparing the fiscal tables (showing the projected, i.e. the realized deficit or surplus), i.e. showing both the revenues and the expenditures above the line and inflows (borrowings, privatization and concession proceeds) and outflows (repayment of debt principal) below the line (whereby “line” means the line showing the deficit/the surplus) is according to the IMF Government Finance Statistics manual (GFS Manual 1986).

However, when preparing the balance sheets of the Budget of the Republic of Macedonia, inflows are also shown as revenues, i.e. outflows are also shown as expenditures. The principle of balancing, i.e. equalizing the revenues (including the inflows) with the expenditures (including the outflows) is also applied on the balance sheets during the budget planning process, while when showing them in the fiscal tables, both revenues and expenditures are shown above the line, and inflows and outflows are shown below the line. Difference between the revenues and the expenditures equals the surplus or the deficit. Surplus, i.e. deficit, should be equal to the financing below the line, however with an opposite sign. Thus, if there is a deficit (negative sign, there should be financing (positive sign). Financing is obtained as difference between inflows and outflows and net changes in deposits (which are actually a residual of the three previously mentioned categories: inflows, outflows and deficit/surplus).

As for the fiscal tables, net changes are shown below the line, under the inflows (shown with “-“ should there be an increase in deposits or with “+“ should there be a decline or drawing down of deposits).
